SALIVA HORMONE TESTING

Saliva Hormone Testing is comprehensive hormonal testing for men and women through saliva analysis. WHO (World Health Organization) has determined that this is the most accurate physiological assessment of hormonal function. Most labs only test four samples each day, we test five samples each day to assure even greater accuracy.

Effective for dysmenorrhea, pre and post-menopausal disorders and anti-aging. Hormones target all tissues in the body. Imbalances influence memory, IQ, cognitive abilities, weight, digestion, skin, hair, libido, and more. It is an important aspect of wellness care.

Natural transdermal hormone replacement products are available utilizing liposome technology. This is a vital tool to help achieve functional longevity.

The test is as easy as spitting in a straw. This is invaluable information for anyone who has a chronic or significant health problem or simply wants to look and feel younger. Call today.
